

## PRESSRELEASE JULY 2006

### CESAR PRO 07

New School Board  
Size: 132cm x 40cm  
Weight. 2,3kg

**NEW SCHOOL**  
**GOOD UPWIND PERFORMANCE**  
**EASY LANDINGS FOR POWERFULL TRICKS**  
**EXCELLENT TAIL GRIP AND GOOD POP**  
**HARD FLEX**

After the long awaited arrival of The Cesar Pro Model, it's finally here! The Cesar emerges as a new school competition board designed to push the limits of freestyle performance and accommodate Cesar's powerful riding style.

The flat rocker and straight outline deliver maximum speed, grip and upwind performance. Stiff flex and wide tips create explosive pop for fast, precise take-offs and hot bounce-free landings for the most powered tricks. The tip wingers make the Cesar easy to control even in the strongest wind conditions.

The Cesar is truly a no-compromise, total-performance freestyle board aimed at powerful, aggressive riders.

## SKY PRO 07

New School Board  
Size: 136cm x 41cm  
Weight: 2,5kg

EXCELLENT UP WIND PERFORMANCE  
GOOD TAIL GRIP AND EASY LANDINGS  
PERFORMANCE FOR THE HEAVIER ONES  
HARD FLEX

Introducing the Sky Pro Model for 2007. Already two years in the making, the Sky Pro raises the bar of performance, comfort and style.

"I use my board in almost every condition with anything from a 5M kite all the way up to 20M! It's an awesome board for bigger riders, light wind or any rider wanting more surface area for hard fast landings. It flies upwind and has insane pop for powered tricks. The whole secret to this board's wide range is in the tip design. The tip allows the tail of the board to sit deep in the water giving it excellent upwind drive while at the same time reducing splash on the rider from the opposite tip and creating a super smooth ride. The wide stance setting lowers the riders center of gravity for hard, fast landings."

## PHANTOM 07

Lightwind Board  
Speed Crossing Board

Sizes:

Lightwind Cruiser 149cm x 43cm  
Speed Crossing Board 138cm x 37cm

**INCREDIBLE UPWIND PERFORMANCE (INVERTED OUTLINE)  
EARLY PLANING EVEN IN THE LIGHTEST WINDS  
REDUCED TOESIDE AREA FOR BEST CONTROL  
HARD FLEX**

### PHANTOM M

The Phantom LW is the benchmark for early planing, rapid acceleration and perfect upwind performance. Due to its gentle sidecut, this early planing machine is able to sail upwind at a windspeed of only 9 knots. With a width of 43 cm, the board starts planing in the slightest breeze, yet remains very controllable at higher wind speeds due to the wide stance that was shifted closer to the edge. If you live in a light wind area, the Phantom is the perfect second board in your quiver that allows you to have fun when others are beached and bored.

### PHANTOM LW

Here we are with a completely new board concept. Effortless planing, easy upwind, incredible speed and best control, all comes together in one new and exciting board design. You can call it the Ferrari of the Kiteboards. This might be the most efficient board shape you have ever tried to kitesurf with. The parabolic and long outline on the heel side will give you the longest possible rail in the water, perfect for going upwind. The specially designed bottom shape will increase that lift. The rounded outline on your toe side will reduce wetted surface and provide better control in conjunction with the cut outs on the tips. You have never experienced going upwind so efficient than on this board. You hardly have to use your body weight to keep the rail under control. Upwind like on Autopilot. Fast and furious but a lot of fun.

## MULTI ADJUSTABLE FOOTSTRAP 07 FOOTPADPLATE 07

Variable strap positions and widths with just one strap  
Plug and screw, fast setup

Easy to adjust for different sizes

The new Multi Adjustable Footstrap developed by North Kiteboarding has many new features and advantages over last year's model:

This footstrap adds a whole new dimension. It not only permits adjusting size and asymmetry but also width. Once fitted to the width and shape of the foot it can be adjusted as usual in size (with or without a shoe).

The newly developed base permits mounting the strap to the North Kiteboarding Footpadplate on the board without any effort – simply "plug and screw"!

Plug and Screw

Easy Different Sizes
